Commits	Files	Tests	Models	Migrations	API endpoints

Two phases of a production-grade SaaS built from an empty repo: full product blueprint, a Next.js + NestJS + FastAPI monorepo, enterprise authentication, an AI Property Analyzer, a Command Center dashboard, a reservation data pipeline with a live channel connector, and full deployment tooling. 136 automated tests; all green.

1. Delivery Timeline (15 commits)

#	Milestone
1	Complete product blueprint (docs 00-10, BLUEPRINT.md)
2	CLAUDE.md engineering contract
3	Monorepo scaffold + Landing page
4	Pricing page (single-sourced plan catalog)
5	Contact page (full-stack: NestJS API + email)
6	Full-codebase audit fixes (security, a11y, SEO, scalability)
7	AI Property Analyzer (web + API + FastAPI AI service)
8	Enterprise authentication, sessions & RBAC
9	Dashboard: mobile-first Command Center, 8 widgets
10	Property Setup Wizard + Property entity
11	Phase 1 & Phase 2 audit reports (PDF)
12	Reservations: iCal channel connector + live dashboard + RLS
13	Deploy tooling: workflow + verification harness
14	Next.js security upgrade 15.1.2 -> 15.5.19

2. What Was Built

Frontend - apps/web (Next.js 15.5)

- Marketing: Landing, Pricing (toggle + comparison matrix + FAQ), Contact.
- AI Analyzer: guided form + money-first growth report.
- Auth: signup, login (+Google +magic link), forgot/reset password, verify email.

- Onboarding: 3-step Property Setup Wizard.
- Dashboard: Command Center with 8 widgets (revenue, occupancy, check-ins/outs, AI recs, health, leads, notifications).
- Design system (packages/ui), i18n (RTL-ready), SEO (OG image, sitemap, robots, JSON-LD), edge middleware route guards.

Core API - services/api (NestJS)

- Auth module: bcrypt, JWT access + rotating refresh w/ reuse-detection, CSRF, secure cookies, audit log, hierarchical RBAC.
- Modules: contact, analyzer (AI client), properties, dashboard, reservations + channels, health (live + ready).
- Cross-cutting: Zod validation, RFC-7807 errors, rate limiting, Helmet, fail-fast prod env, tenant context (withTenant + RLS).

AI service - services/ai (FastAPI, Python)

- Property Analyzer 'Onboarding Scout': Claude (claude-opus-4-8, structured outputs) primary + deterministic heuristic fallback; service-token auth.

Shared packages

- domain (Zod contracts, mirrored in Python), db (Prisma, 13 models, 5 migrations, RLS), api-client (typed), ui, i18n, utils, config.

3. Data Model & APIs

13 Prisma models: Organization, User, Membership, Property, ChannelConnection, Reservation, Session, VerificationToken, OAuthAccount, AuditLog, AnalyzerReport, AiAction, ContactLead. 5 migrations with Row-Level Security on tenant tables.

~26 API endpoints incl. /v1/auth/* (14), /v1/properties, /v1/channels, /v1/channels/:id/sync, /v1/reservations, /v1/dashboard, /v1/analyzer/*, /v1/contact, /v1/health[/ready]; AI service POST /v1/analyze.

4. Quality & Testing

Area	Result
Automated tests	136 passing (122 TypeScript + 14 Python)
Gate	lint + typecheck + test + build green across all workspaces
CI	GitHub Actions: provisions Postgres+pgvector, runs migrations + cross-tenant RLS test, + Python lane
Security	bcrypt, hashed/rotated tokens, CSRF, secure cookies, RLS, fail-fast env; Next.js patched to 15.5.19
Docs	17 docs: blueprint (00-10), 3 ADRs, deployment runbook + report, 2 audit PDFs

5. Current Status

Phase	Completion
Phase 1 - Public Foundation	100% (Landing, Pricing, Contact, Analyzer, Auth, Dashboard, Wizard)
Phase 2 - Operational MVP	~25-30% (reservation spine + iCal connector + live booking widgets + deploy tooling)
Deployment	Artifacts + one-click workflow + verify harness ready; provisioning/deploy pending cloud credentials

6. Remaining Before First Beta Customer

- Provision Postgres+pgvector & Redis; deploy API/AI (Railway) + Web (Vercel); set env; run migrations.
- Scheduled sync worker (auto-refresh reservations) + a channel-connect UI for hosts.
- Real Google OAuth + Resend credentials + captcha on public endpoints.
- Observability (Sentry), an e2e happy-path test, and a revenue data source so revenue isn't estimated.

Not started (deferred by design until reservation data flows): Smart Inbox, Revenue Manager, Marketing Manager, Reputation Manager, CRM, Booking Engine, Mobile app.
